### PROJECTS

#### Task Manager Web Application

Task Manager Web Application

- Developed a full-stack web application with a responsive front-end (HTML, CSS, Bootstrap) and back-end built in Flask and Python with SQLite
- Implemented CRUD operations (create, read, update, delete) for task management
- Learned RESTful API integration and template rendering (Jinja2)

#### Personal Expense Tracker CLI Application

Personal Expense Tracker CLI Application

- Built a command-line based expense tracker using Python and SQLite
- Designed with modular structure and proper error handling
- Focused on object-oriented design principles

#### Spam E-mail Classifier

Spam E-mail Classifier

- Developed a Spam Email Classifier using Python, scikit-learn, and NLP techniques (tokenization, stop-word removal, TF-IDF) to detect spam messages
- Trained and evaluated a Naive Bayes model, achieving ~95% accuracy on the SMS Spam Collection dataset
- Deployed the model as a simple Flask web application, allowing users to input messages and receive real-time spam predictions
